Full Stack Web Development, *Avion School*   **B.S. Entrepreneurship,** *De La Salle University*

PROJECT WORK

Messenger App | Front-end Developer | Code   August 2021
A React JS Chat App that allows for private messaging amongst users within the platform.
- Implemented a private messaging feature that allows users to message all other users within the application.
- Developed chat components using ReactJS, and JavaScript to streamline user experience flow.
- Added a feature to be able to check the profile of the current user and to log in and out of the application.
- Used Axios to make request with the backend for seamless messaging.

Stock Trading App | Developer | Code   September 2021
Stock Trading App built with Ruby on Rails that allows users to purchase stocks using an API with a feature for market monitoring.
- Ensure users are able to sign up and login to their own password-protected accounts.
- Added a news section where users can view the latest news on top companies and stocks like Ford and Apple
- Included a Stocks tab to view the stocks listed as Most Active, Top Gainers, Top Losers and relevant data.
- Implemented an admin dashboard to view, approve, create, monitor and delete users.
- Utilized the IEX gem to retrieve real-time stock data like volume, last price, change and % change.

Task App | Developer | Code   October 2021
A Ruby on Rails task management application that allows users to add, edit and track their projects & tasks.
- Integrated a signup and login feature to allow users to store their projects tasks on personal accounts.
- Allowed users to create custom projects to sort their tasks easily.
- Enabled users to edit, update, and delete projects and tasks.
- Added a feature that allows users to check the progress of their project based on the completion of its tasks.
